

JACKSON CONCRETE

Wants to Help You

Save Your Concrete Investments!

As a Wisconsin homeowner, you are required to perform regular preventative maintenance in order to preserve the beauty and value of your home: You seal your windows, stain your wooden exteriors, and wax your vehicles. Your concrete driveways are no exception.

The salt and de-icers that are used to protect you from slippery conditions can do significant damage to your concrete.

** New concrete surfaces MUST be sealed with a water repellent concrete hardener/sealer for the first 3 years.

** Old concrete and really old concrete has a better chance of surviving the winter without damage if it is sealed every other year or as the

surface sealer shows wear.

If you have a concrete driveway and are unsure if it's protected please call and one of our associates will be more than happy to speak with you. (262) 335-2321

When the bitter cold and snow finally begin to disappear, the last thing you want to have to do is repair the approach to your family's home.

See and purchase all your concrete supplies at our showroom.
